

Convert the pervious question in to descending order?

Pseudo Code

REVERSE-INSERTION-SORT(A)

1. For $j = 2$ to $A.length$
2. $key = A[j]$
3. // Insert $A[j]$ into the sorted sequence $A[1..j-1]$
4. $i = j - 1$
5. While $i > 0$ and $A[i] < key$ // Change comparison sign to ' $<$ '
6. $A[i+1] = A[i]$
7. $i = i - 1$
8. $A[i+1] = key$

Answer

```
def reverse_insertion_sort(A):
```

```
    # Iterate through the array starting from the second element
```

```
    for j in range(1, len(A)):
```

```
        key = A[j]
```

```
        i = j - 1
```

```
        # Move elements of A[0..j-1] that are smaller than key to one position ahead
```

```
        while i >= 0 and A[i] < key: # Comparison is reversed for descending order
```

```
            A[i + 1] = A[i]
```

```
            i -= 1
```

```
# Place key at the correct position
```

```
A[i + 1] = key
```

```
return A
```

```
# Test case
```

```
array = [12, 11, 13, 5, 6]
```

```
print("Sorted array in descending order:", reverse_insertion_sort(array))
```
